

Compact II & Basic: Push/Pull

Pull to Accelerate & Push to Brake

Compact with 5 button Commander

Basic Hand Control

The Compact II and Basic from Veigel transfer the throttle from the foot pedal to a pull handle and push to brake for your right hand.

Elegant, ergonomic, floor-mounted design

The unique push pull motion prevents simultaneous use of the gas and brake which is a safer solution for some people. The second pivot point for acceleration allows for more range of seat positioning when compared to a traditional right hand push pull hand control so you can enjoy a more comfortable driving experience

The Veigel Basic is a price conscious alternative to the Veigel Compact II. The design is based upon the original Compact version but does not utilize an additional pivot point for acceleration. This simple yet reliable design makes for safe, comfortable driving.

Both the Basic and Compact come with the option to have secondary controls whether it be the 5 button Commander switch on the Compact or the Tri-pin with momentary switches on the Basic.

For over 100 years, Veigel has been designing award-winning ergonomic, reliable and easy-to-use driving aids and controls for people with disabilities.

- Enables users with partial or limited use of their legs to drive by transferring acceleration & braking to their right hand

- Lockable push brake, allowing you to remove your hand while stopped

- Floor mounted position allows for adjustment of the steering wheel to be retained

- Ideal for use in conjunction with a steering aid

- Commander version available with indicators & secondary controls

- Basic hand control version available with switches to activate turn signals.
